Expandable Screen Size

The screen size can be as large as users want by tiling up displays horizontally and vertically. This provides viewers with an incredibly immersive visual experience.

Variety of Curvature for Landmarks

The 55EF5F series supports various concave and convex curvature in both portrait and landscape orientations. You can differentiate your space in a variety of ways with beautifully curved displays to keep your audience captivated and immersed.

Satellites
Satellites are used for many purposes. Among several other applications, they can be used to make star maps and maps of planetary surfaces, and also take pictures of planets.

Astronaut
An astronaut is a person trained by a spaceflight program to command, pilot, or as a crew member of a spacecraft.

In Portrait

Max Curvature in Portrait
• Concave/Convex: up to 1,000R

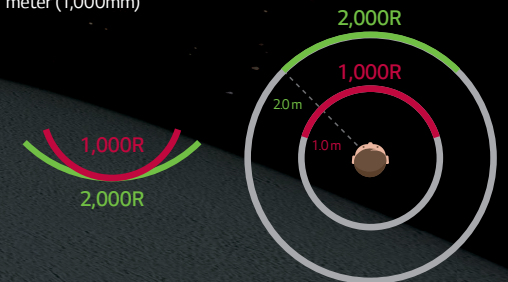

In Landscape

Max Curvature in Landscape
• Concave/Convex: up to 1,000R

What is R?

Due to the nature of its curved design, "R" signifies the radial length of a circle which allows for its curved display. For example, displays with a curvature of 1,000R will have a radius of 1 meter (1,000mm)

On-site Customization

The 55EF5F series enables a completely new approach for innovative and flexible designs. Its optional "Curvature Calibrator"¹ supports the coordination of displays with various convex and concave curvature, depending on the requirements. This makes it possible to rapidly respond to changes on-site, making it easier to successfully build a customized, eye-catching landmark.

1) A Curvature Calibrator needs to be purchased separately.
Please contact your regional LG sales representatives for details.

LAN Daisy Chain Management

The LAN daisy chain allows users to control and monitor displays, transmit data and even update firmware all at once, reducing management burden.

Synced Playback

Through its built-in high performance SoC, each display plays its video tile without lag for synchronized content playback.
